INDEX TO AUTHORS.

A

Abramson, Harold A., and **Gray, Samuel H.** The diffusion of water into lecithin-collodion membranes, 459

Addington, L. H. See ROBINSON, HUFFMAN, and BURT, 477

Alsberg, C. L. See GOTTENBERG and ALSBERG, 581

Andrew, Robert H. See FENGER and ANDREW, 371

Andrews, Samuel, and **Schmidt, Carl L. A.** Titration curves of taurine and of cysteic acid, 651

Atchley, Dana W., and **Benedict, Ethel M.** The distribution of electrolytes in dogs following ligation of both ureters, 1

B

Beadles, Jessie R. See MITCHELL, BEADLES, and KRUGER, 767

Beard, Howard H. See RAPPORT and BEARD, 285, 299

Bellinger, Margaret. See LENNOX, 237

Bencowitz, Isaac. See LEVENE and BENCOWITZ, 679

Benedict, Ethel M. See ATCHLEY and BENEDICT, 1

Bock, A. V., Dill, D. B., Hurxthal, L. M., Lawrence, J. S., Coolidge, Thomas C., Dailey, Mary Elizabeth, and **Henderson, L. J.** Blood as a physicochemical system. V. The composition and respiratory exchanges of normal human blood during work, 749

—. See DILL, VAN CAULAERT, HURXTHAL, STODDARD, BOCK, and HENDERSON, 251

Brekke, Viola. See OUTHOUSE, MACY, BREKKE, and GRAHAM, 203

Brown, J. B. See LEE and BROWN, 69

Buchwald, K. W. See REINHARD and BUCHWALD, 383

Burt, K. L. See ROBINSON, HUFFMAN, and BURT, 477

C

Calvery, H. O. A note on the enzyme uricase, 77

— and **Jones, Walter.** The nitrogenous groups of nucleic acid, 73

— and **Remsen, D. B.** The nucleotides of triticonucleic acid, 593

XUM

Carpenter, Thorne M., and **Fox, Edward L.** Absence of stratification and rapidity of mixing of carbon dioxide in air samples, 379

Carter, Kenneth L. See CLARK and CARTER, 391

van Caulaert, C. See DILL, VAN CAULAERT, HURXTHAL, STODDARD, BOCK, and HENDERSON, 251

Chaikoff, I. L., and **Macleod, J. J. R.** The effect of insulin on the respiratory exchange of fed and fasting rabbits, 725

Ciocalteu, Vintila. See FOLIN and CIOCALTEU, 627

Clark, Guy W. Acid- and base-forming elements in foods. A correction, 389

— and **Carter, Kenneth L.** Factors involved in the reaction changes of human saliva, 391

Coolidge, Thomas' C. See BOCK, DILL, HURXTHAL, LAWRENCE, COOLIDGE, DAILEY, and HENDERSON, 749

Cori, Carl F. See CORI and CORI, 555

Cori, Gerty T., and **Cori, Carl F.** The fate of sugar in the animal body. VI. Sugar oxidation and glycogen formation in normal and insulinized rats during the absorption of fructose, 555

Cotonio, Margherita. See DAVENPORT and COTONIO, 359, 463

—. See FRIEDEMANN, COTONIO, and SHAFFER, 335

Csonka, Frank A., and **Jones, D. Breese.** Studies on glutelins. I. The α- and β-glutelins of wheat (*Triticum vulgare*), 321

D

Dailey, Mary Elizabeth. See BOCK, DILL, HURXTHAL, LAWRENCE, COOLIDGE, DAILEY, and HENDERSON, 749

Davenport, H. A., and **Cotonio, Margherita.** A condenser unit for use in the determination of lactic acid, 359

— and —. Lactic acid formation in muscle extract, 463

Denis, W., and **Reed, Lucille.** Concerning the effect produced by the administration of sulfur on the concentration of certain sulfur compounds in blood and urine, 51

— and —. A study of the influence of kidney function on the concentration of certain non-protein sulfur compounds in the blood, 41

—. See REED and DENIS, 623

Dill, D. B., van Caulaert, C., Hurxthal, L. M., Stoddard, James L., Bock, A. V., and **Henderson, L. J.** Blood as a physicochemical system. IV, 251

—. See BOCK, DILL, HURXTHAL, LAWRENCE, COOLIDGE, DAILEY, and HENDERSON, 749

Doby, Geza, and **Hibbard, R. P.** Nutrient ions of plants and the ion activation of plant enzymes, 405
Dow, Odessa D. See SUPPLEE and Dow, 617

E

Eckstein, H. C. The cholesterol content of hair, wool, and feathers, 363
Eisenman, Anna J. See WAKEMAN, EISENMAN, and PETERS, 567

F

Fenger, Frederic, and **Andrew, Robert H.** On the isoelectric precipitation of pepsin, 371
Folin, Otto, and **Ciocalteu, Vintila.** On tyrosine and tryptophane determinations in proteins, 627
Fox, Edward L. See CARPENTER and FOX, 379
Friedemann, Theodore E. The action of alkali and hydrogen peroxide on glyoxals, 331
—, **Cotonio, Margherita,** and **Shaffer, Philip A.** The determination of lactic acid, 335

G

Gellis, Archie D. See SHORT and GELLIS, 219
Gottenberg, M. J., and **Alsberg, C. L.** The behavior of the prolamins in mixed solvents. III. The denaturation of wheat gliadin, 581
Graham, Alice. See MACY, OUTHOUSE, GRAHAM, and LONG, 175, 189
—. See MACY, OUTHOUSE, LONG, and GRAHAM, 153
—. See OUTHOUSE, MACY, BREKKE, and GRAHAM, 203
Gray, Samuel H. See ABRAMSON and GRAY, 459

H

Harding, Victor John, and **Montgomery, Richard Clifton.** Nitrogen metabolism in the puerperium, 27
Hart, E. B., Steenbock, H., Scott, H., and **Humphrey, G. C.** Dietary factors influencing calcium assimilation. X. The influence of ultra-violet light upon calcium and phosphorus metabolism in milking cows, 59
Henderson, L. J. See BOCK, DILL, HURXTHAL, LAWRENCE, COOLIDGE, DAILEY, and HENDERSON, 749
—. See DILL, VAN CAULAERT, HURXTHAL, STODDARD, BOCK, and HENDERSON, 251
Hess, Alfred F., and **Sherman, Elizabeth.** The antirachitic value of irradiated cholesterol and phytosterol. VII. The effect of irradiated cholesterol on the phosphorus and calcium balance, 145
Hessler, M. C. See SHERMAN and HESSLER, 113

Hibbard, R. P. See Doby and Hibbard, 405
Hoffman, William S. The micro determination of pentose in yeast nucleic acid and its derivatives, 15
Huffman, C. F. See Robinson, Huffman, and Burt, 477
Humphrey, G. C. See Hart, Steenbock, Scott, and Humphrey, 59
Hurxthal, L. M. See Bock, Dill, Hurxthal, Lawrence, Coolidge, Dailey, and Henderson, 749
—. See Dill, van Caulaert, Hurxthal, Stoddard, Bock, and Henderson, 251

XUM

INDEX TO SUBJECTS.

A

Absorption:
- Carbon dioxide, by asbestos-sodium hydroxide (ascarite) in gravimetric metabolism determinations (LEE and BROWN) 69
- Fructose, glycogen formation in normal and insulinized rats during (CORI and CORI) 555
- —, sugar oxidation in normal and insulinized rats during (CORI and CORI) 555
- Water, by magnesium perchlorate trihydrate (dehydrite) in gravimetric metabolism determinations (LEE and BROWN) 69

Adsorption:
- Carotin by charcoals and inorganic salts (WILLIMOTT) 587

Air:
- Carbon dioxide in, absence of stratification and rapidity of mixing (CARPENTER and FOX) 379

Alkali:
- Glyoxals, action on (FRIEDEMANN) 331

Amino acid(s):
- Protein split-product, fraction extracted by butyl alcohol, relation to specific dynamic action of protein (RAPPORT and BEARD) 299

Apparatus:
- Blood gas, manometric, carbon dioxide factors (VAN SLYKE and SENDROY) 127
- Gas, manometric, portable (VAN SLYKE) 121
- Respiratory quotient of small animals (WESSON) 499

Asbestos:
- Sodium hydroxide and, (ascarite), carbon dioxide absorption in gravimetric metabolism determination (LEE and BROWN) 69

Ascarite:
- (Asbestos-sodium hydroxide), carbon dioxide absorption in gravimetric metabolism determination (LEE and BROWN) 69

Assimilation:
- Calcium, dietary factors influencing. X (HART, STEENBOCK, SCOTT, and HUMPHREY) 59

B

Blood:
Cell, red. *See* Erythrocyte.
Chloride, method (Short and Gellis) 219
Composition during work (Bock, Dill, Hurxthal, Lawrence, Coolidge, Dailey, and Henderson) 749
Gas apparatus, manometric, carbon dioxide factors (Van Slyke and Sendroy) 127
Physicochemical system. IV (Dill, van Caulaert, Hurxthal, Stoddard, Bock, and Henderson) 251
— —. V. (Bock, Dill, Hurxthal, Lawrence, Coolidge, Dailey, and Henderson) 749
Respiratory exchanges during work (Bock, Dill, Hurxthal, Lawrence, Coolidge, Dailey, and Henderson) 749
Sugar curves, and sugar-regulating mechanism (Lennox) 237
Sulfur compounds, concentration affected by sulfur administration (Denis and Reed) 51
—, non-protein compounds, kidney function influence on concentration (Denis and Reed) 41
—, —, distribution between serum and corpuscles (Reed and Denis) 623
Butyl alcohol:
Protein split-product, fraction extracted by, amino acids of, and relation to specific dynamic action of protein (Rapport and Beard) 299
— —, — — — and precipitated in (Rapport and Beard) 285

C

Calcium:
Assimilation, dietary factors influencing. X (Hart, Steenbock, Scott, and Humphrey) 59
Cholesterol, irradiated, effect (Hess and Sherman) 145
Diet high in, metabolism (Karelitz and Shohl) 655
Metabolism in milking cows, ultra-violet light influence upon (Hart, Steenbock, Scott, and Humphrey) 59
Milk, dry, summer- and winter-produced, irradiated and non-irradiated, calcifying properties (Supplee and Dow) 617
Carbohydrate:
Fat formed from, relation to dietary factor (Wesson) 507
Metabolism, intermediary. II (Wierzuchowski) 417
—, —. III (Wierzuchowski) 445

Carbon dioxide:
Absorption by asbestos-sodium hydroxide (ascarite) in gravimetric metabolism determination (LEE and BROWN) 69
Air samples, absence of stratification and rapidity of mixing (CARPENTER and FOX) 379
Factors for manometric blood gas apparatus (VAN SLYKE and SENDROY) 127
Urea determination by gasometric measurement of, formed by urease action (VAN SLYKE) 695

Carotin:
Adsorption by charcoals and inorganic salts (WILLIMOTT) 587

Charcoal:
Carotin adsorption by (WILLIMOTT) 587

Chloride:
Blood, methods (SHORT and GELLIS) 219

Cholesterol:
Feathers (ECKSTEIN) 363
Hair (ECKSTEIN) 363
Irradiated, antirachitic value. VII (HESS and SHERMAN) 145
—, effect on phosphorus and calcium balance (HESS and SHERMAN) 145
Irradiation, x-ray and γ-ray (REINHARD and BUCHWALD) 383

Cholesterol—*continued:*
Oxidation products, influence of irradiation (SCHLUTZ, ZIEGLER, and MORSE) 209
Wool (ECKSTEIN) 363

Collodion:
-lecithin membranes, water diffusion (ABRAMSON and GRAY) 459

Concentration:
Optical rotation of pentacetates of glucose and mannose, influence of (LEVENE and BENCOWITZ) 679

Condenser:
Lactic acid determination (DAVENPORT and COTONIO) 359

Corpuscle:
Sulfur, non-protein, blood, distribution between serum and (REED and DENIS) 623

Cysteic acid:
Titration curves (ANDREWS and SCHMIDT) 651

Cystine:
Hair and epidermal tissues (WILSON and LEWIS) 543

D

Dehydrite:
(Magnesium perchlorate trihydrate), water absorption in gravimetric metabolism determination (LEE and BROWN) 69

Denaturation:
Wheat gliadin (GOTTENBERG and ALSBERG) 581

XUM

Diabetes:
Phlorhizin, glucose action (Wierzuchowski) 445
—, ketosis (Wierzuchowski) 417
Dialanyl-cystine:
Nutrition (Lewis and Lewis) 535
Dialanyl-cystine dianhydride:
Nutrition (Lewis and Lewis) 535
Diet:
Calcium assimilation, dietary factors influencing. X (Hart, Steenbock, Scott, and Humphrey) 59
—, high, and phosphorus, low, metabolism (Karelitz and Shohl) 655
Fat formation from carbohydrate, relation to dietary factor (Wesson) 507
Phosphate addition, in rickets (Karelitz and Shohl) 665
Tryptophane-deficient, indole derivatives, effect (Jackson) 523
Diffusion:
Water into lecithin-collodion membranes (Abramson and Gray) 459
Diglycyl-cystine:
Nutrition (Lewis and Lewis) 535

E

Electrolyte:
Distribution following ligation of ureters (Atchley and Benedict) 1
Enzyme:
Plant, ion activation (Doby and Hibbard) 405
Uricase (Calvery) 77
Epidermis:
Cystine in epidermal tissues (Wilson and Lewis) 543
Equilibrium:
Phosphorus and calcium, irradiated cholesterol, effect (Hess and Sherman) 145
Erythrocyte:
Permeability (Wakeman, Eisenman, and Peters) 567
Extract:
Muscle, lactic acid formation in (Davenport and Cotonio) 463
Parathyroid, administration to normal calves (Robinson, Huffman, and Burt) 477

F

Fasting:
Insulin effect on respiratory exchange in (Chaikoff and Macleod) 725
Fat:
Formation from carbohydrate, relation to dietary factor (Wesson) 507
Feathers:
Cholesterol content (Eckstein) 363
Fructose:
Glycogen formation in normal and insulinized rats during absorption of (Cori and Cori) 555

Fructose—*continued:*
Sugar oxidation in normal and insulinized rats during absorption of (Cori and Cori) 555

G

Gas:
Blood, manometric apparatus, carbon dioxide factors (Van Slyke and Sendroy) 127
Manometric apparatus, portable (Van Slyke) 121
Urea determination by gasometric measurement of carbon dioxide formed by urease action (Van Slyke) 695
Gliadin:
Wheat, denaturation (Gottenberg and Alsberg) 581
Glucose:
Insulin inactivated by (du Vigneaud) 275
Pentacetates, optical rotation influenced by solvent and concentration (Levene and Bencowitz) 679
Phlorhizin diabetes, action (Wierzuchowski) 445
Glutelin:
I (Csonka and Jones) 321
α-Glutelin:
Wheat (*Triticum vulgare*) (Csonka and Jones) 321
β-Glutelin:
Wheat (*Triticum vulgare*) (Csonka and Jones) 321
Glycogen:
Formation during fructose absorption in normal and insulinized rats (Cori and Cori) 555
Glyoxal:
Alkali action on (Friedemann) 331
Hydrogen peroxide action on (Friedemann) 331

H

Hair:
Cholesterol content (Eckstein) 363
Cystine (Wilson and Lewis) 543
Hydrogen peroxide:
Glyoxals, action on (Friedemann) 331
Hydrolysis:
Propylene oxide, optically active, mechanism (Levene and Walti) 263

I

Indole:
Derivatives, tryptophane-deficient diet, effect (Jackson) 523
Inorganic:
Salts, carotin adsorption by (Willimott) 587
Insulin:
Glycogen formation during fructose absorption in insulinized rats (Cori and Cori) 555
Inactivation by glucose (du Vigneaud) 275
Respiratory exchange in fed and fasting rabbits, effect (Chaikoff and Macleod) 725

Insulin—*continued:*
Sugar oxidation during fructose absorption in insulinized rats (Cori and Cori) 555
Invertase:
Action, kinetics (Nelson and Larson) 223
Ion:
Activation of plant enzymes (Doby and Hibbard) 405
Nutrient, plant (Doby and Hibbard) 405
Irradiation:
Cholesterol, antirachitic value. VII (Hess and Sherman) 145
—, effect on phosphorus and calcium balance (Hess and Sherman) 145
— oxidation products, influence (Schlutz, Ziegler, and Morse) 209
—, x-ray and γ-ray (Reinhard and Buchwald) 383
Milk, dry, antirachitic properties (Supplee and Dow) 617
—, —, calcifying properties (Supplee and Dow) 617
Phytosterol, antirachitic value. VII (Hess and Sherman) 145

K

Ketosis:
Phlorhizin diabetes (Wierzuchowski) 417
Kidney:
Sulfur compounds of blood, non-protein, concentration influenced by kidney function (Denis and Reed) 41
Kinetics:
Invertase action (Nelson and Larson) 223

L

Lactic acid:
Condenser unit for determination (Davenport and Cotonio) 359
Determination (Friedemann, Cotonio, and Shaffer) 335
Muscle extract, formation in (Davenport and Cotonio) 463
Lecithin:
-collodion membranes, water diffusion (Abramson and Gray) 459
Lemon:
Juice, antiscorbutic factor, solubilities (Vedder and Lawson) 215
Light:
Ultra-violet, calcium metabolism in milking cows influenced by (Hart, Steenbock, Scott, and Humphrey) 59
—, phosphorus metabolism in milking cows influenced by (Hart, Steenbock, Scott, and Humphrey) 59

M

Magnesium perchlorate trihydrate:
(Dehydrite), water absorption in gravimetric metabolism determination (Lee and Brown) 69

Mannose:
Pentacetates, optical rotation influenced by solvent and concentration (LEVENE and BENCOWITZ) 679
Meat:
Connective tissue, content in relation to nutrition (MITCHELL, BEADLES, and KRUGER) 767
Membrane:
Lecithin-collodion, water diffusion (ABRAMSON and GRAY) 459
Metabolism:
Asbestos-sodium hydroxide (ascarite), carbon dioxide absorption in gravimetric determination (LEE and BROWN) 69
Calcium, high, and phosphorus, low, diets (KARELITZ and SHOHL) 655
—, in milking cows, ultra-violet light influence upon (HART, STEENBOCK, SCOTT, and HUMPHREY) 59
Carbohydrate, intermediary. II (WIERZUCHOWSKI) 417
—, —. III (WIERZUCHOWSKI) 445
Magnesium perchlorate trihydrate (dehydrite), water absorption in gravimetric determination (LEE and BROWN) 69
Nitrogen, in puerperium (HARDING and MONTGOMERY) 27
Pentose. II (YOUNGBURG) 599
Metabolism—*continued:*
Phosphorus, in milking cows, ultra-violet light influence upon (HART, STEENBOCK, SCOTT, and HUMPHREY) 59
Protein split-products, effect on. I (RAPPORT and BEARD) 285
— —, — —. II (RAPPORT and BEARD) 299
Sulfur (SHERWIN, SHIPLE, and ROSE) 607
—. XII (LEWIS and LEWIS) 535
Milk:
Calcium metabolism in milking cows, ultra-violet light influence upon (HART, STEENBOCK, SCOTT, and HUMPHREY) 59
Cow's, vitamin A and B content (OUTHOUSE, MACY, BREKKE, and GRAHAM) 203
Dry, antirachitic properties, summer- and winter-produced, irradiated and non-irradiated (SUPPLEE and DOW) 617
—, calcifying properties, summer- and winter-produced, irradiated and non-irradiated (SUPPLEE and DOW) 617
Human. I (MACY, OUTHOUSE, LONG, and GRAHAM) 153
—. II (MACY, OUTHOUSE, GRAHAM, and LONG) 175
—. III (MACY, OUTHOUSE, GRAHAM, and LONG) 189

Milk—*continued:*
Human. IV (Outhouse, Macy, Brekke, and Graham) 203
Phosphorus metabolism in milking cows, ultra-violet light influence upon (Hart, Steenbock, Scott, and Humphrey) 59
Ultra-violet light, influence upon calcium and phosphorus metabolism in milking cows (Hart, Steenbock, Scott, and Humphrey) 59
Muscle:
Extract, lactic acid formation in (Davenport and Cotonio) 463

N

Nitrogen:
Metabolism in puerperium (Harding and Montgomery) 27
Nucleic acid, nitrogenous groups (Calvery and Jones) 73
Nucleic acid:
Nitrogenous groups (Calvery and Jones) 73
Yeast, micro determination of pentose in (Hoffman) 15
Nucleotide:
Triticonucleic acid (Calvery and Remsen) 593
Nutrition:
Dialanyl-cystine (Lewis and Lewis) 535
— dianhydride (Lewis and Lewis) 535
Diglycyl-cystine (Lewis and Lewis) 535
Nutrition—*continued:*
Meat, connective tissue content in relation to protein value (Mitchell, Beadles, and Kruger) 767
Plant, ions (Doby and Hibbard) 405

O

Optical rotation:
Concentration influence on, pentacetates of glucose and mannose (Levene and Bencowitz) 679
Propylene oxide, mechanism of hydrolysis (Levene and Walti) 263
Solvent influence on, pentacetates of glucose and mannose (Levene and Bencowitz) 679
Oxidation:
Cholesterol, products, influence of irradiation (Schlutz, Ziegler, and Morse) 209
Sugar, during fructose absorption in normal and insulinized rats (Cori and Cori) 555

P

Parathyroid:
Extract, administration to normal calves (Robinson, Huffman, and Burt) 477
Pentacetate:
Glucose, optical rotation influenced by solvent and concentration (Levene and Bencowitz) 679

Pentacetate—*continued:*
Mannose, optical rotation influenced by solvent and concentration (LEVENE and BENCOWITZ) 679
Pentosan:
Micro method (YOUNGBURG) 599
Pentose:
Metabolism. II (YOUNGBURG) 599
Micro determination, yeast nucleic acid and derivatives (HOFFMAN) 15
— method (YOUNGBURG) 599
Pepsin:
Isoelectric precipitation (FENGER and ANDREW) 371
Permeability:
Red blood cell (WAKEMAN, EISENMAN, and PETERS) 567
Phlorhizin:
Diabetes, glucose action (WIERZUCHOWSKI) 445
—, ketosis (WIERZUCHOWSKI) 417
Phosphate:
Diet, addition to, in rickets (KARELITZ and SHOHL) 665
Phosphorus:
Cholesterol, irradiated, effect (HESS and SHERMAN) 145
Diet low in, metabolism (KARELITZ and SHOHL) 655
Metabolism in milking cows, ultra-violet light influence upon (HART, STEENBOCK, SCOTT, and HUMPHREY) 59
Physiological observations:
Series (SCOTT) 81
Phytosterol:
Irradiated, antirachitic value. VII (HESS and SHERMAN) 145
Plant:
Enzymes, ion activation (DOBY and HIBBARD) 405
Ions, nutrient (DOBY and HIBBARD) 405
Precipitation:
Pepsin, isoelectric (FENGER and ANDREW) 371
Prolamin:
Behavior in mixed solvents. III (GOTTENBERG and ALSBERG) 581
Propylene oxide:
Optically active, mechanism of hydrolysis (LEVENE and WALTI) 263
Protein:
Meat, connective tissue content in relation to nutrition (MITCHELL, BEADLES, and KRUGER) 767
Specific dynamic action, amino acids of fraction of protein split-product extracted by butyl alcohol, relation to (RAPPORT and BEARD) 299
Split-products, effects on metabolism. I (RAPPORT and BEARD) 285
—, — — —. II (RAPPORT and BEARD) 299

XUM

Protein—*continued:*
Split-products, fraction extracted by and precipitated in butyl alcohol (Rapport and Beard) 285
Tryptophane determination (Folin and Ciocalteu) 627
Tyrosine determination (Folin and Ciocalteu) 627
Puerperium:
Nitrogen metabolism (Harding and Montgomery) 27

R

Ray:
γ-Ray, cholesterol irradiation (Reinhard and Buchwald) 383
See also Roentgen ray.
Respiratory exchange:
Blood, during work (Bock, Dill, Hurxthal, Lawrence, Coolidge, Dailey, and Henderson) 749
Insulin effect, fed and fasting rabbits (Chaikoff and Macleod) 725
Respiratory quotient:
Apparatus, small animals (Wesson) 499
Rickets:
I (Karelitz and Shohl) 655
II (Karelitz and Shohl) 665
Cholesterol, irradiated, antirachitic value. VII (Hess and Sherman) 145
Rickets—*continued:*
Milk, dry, summer- and winter-produced, irradiated and non-irradiated, antirachitic properties (Supplee and Dow) 617
Phosphate added to diet (Karelitz and Shohl) 655
Phytosterol, irradiated, antirachitic value. VII (Hess and Sherman) 145
Roentgen ray:
Cholesterol irradiation, (Reinhard and Buchwald) 383

S

Saliva:
Reaction changes (Clark and Carter) 391
Salt(s):
Inorganic, carotin adsorption by (Willimott) 587
Scurvy:
Lemon juice, antiscorbutic factor, solubilities (Vedder and Lawson) 215
Serum:
Sulfur, non-protein, blood, distribution between corpuscles and (Reed and Denis) 623
Sodium hydroxide:
Asbestos and (ascarite), carbon dioxide absorption in gravimetric metabolism determination (Lee and Brown) 69
Solubility:
Antiscorbutic factor of lemon juice (Vedder and Lawson) 215

Solvent:
Optical rotation of pentacetates of glucose and mannose, influence of (LEVENE and BENCOWITZ) 679
Prolamin behavior in mixed. III (GOTTENBERG and ALSBERG) 581
Specific dynamic action:
Protein, amino acids of fraction of protein split-product extracted by butyl alcohol, relation to (RAPPORT and BEARD) 299
Statistics:
Physiological observations (SCOTT) 81
Sugar:
Animal body, fate. VI (CORI and CORI) 555
Blood, curves, and sugar-regulating mechanism (LENNOX) 237
Oxidation during fructose absorption in normal and insulinized rats (CORI and CORI) 555
-regulating mechanism, stimulation (LENNOX) 237
Sulfur:
Administration, blood sulfur compounds, effect on concentration (DENIS and REED) 51
—, urine sulfur compounds, effect on concentration (DENIS and REED) 51
Blood, compounds, concentration affected by sulfur administration (DENIS and REED) 51
Sulfur—*continued:*
Metabolism (SHERWIN, SHIPLE, and ROSE) 607
—. XII (LEWIS and LEWIS) 535
Non-protein, blood, distribution between serum and corpuscles (REED and DENIS) 623
— compounds, blood, kidney function influence on concentration (DENIS and REED) 41
Urine, compounds, concentration affected by sulfur administration (DENIS and REED) 51

T

Taurine:
Titration curves (ANDREWS and SCHMIDT) 651
Tissue:
Connective, meat, relation to protein value in nutrition (MITCHELL, BEADLES, and KRUGER) 767
Epidermal, cystine content (WILSON and LEWIS) 543
Titration:
Cysteic acid, curves (ANDREWS and SCHMIDT) 651
Taurine, curves (ANDREWS and SCHMIDT) 651
Triticonucleic acid:
Nucleotides (CALVERY and REMSEN) 593
Triticum vulgare:
α- and β-glutelins (CSONKA and JONES) 321
Tryptophane:
Diet deficient in, indole derivatives, effect (JACKSON) 523

Tryptophane—*continued:*
Protein, determination (Folin and Ciocalteu) 627
Tyrosine:
Protein, determination (Folin and Ciocalteu) 627

U

Ultra-violet:
Light, calcium metabolism in milking cows influenced by (Hart, Steenbock, Scott, and Humphrey) 59
—, phosphorus metabolism in milking cows influenced by (Hart, Steenbock, Scott, and Humphrey) 59
Urea:
Determination, gasometric measurement of carbon dioxide formed by urease action (Van Slyke) 695
Urease:
Carbon dioxide formed by action of, urea determination by gasometric measurement of (Van Slyke) 695
Ureter:
Ligation, electrolyte distribution following (Atchley and Benedict) 1
Uricase:
(Calvery) 77
Urine:
Sulfur compounds, concentration affected by sulfur administration (Denis and Reed) 51

V

Vitamin(s):
A, cow's milk (Outhouse, Macy, Brekke, and Graham) 203
—, human milk, quantitative estimation (Macy, Outhouse, Graham, and Long) 175
—, quantitative determination. I (Sherman and Hessler) 113
B, complex, two active factors in (Salmon) 483
—, cow's milk (Outhouse, Macy, Brekke, and Graham) 203
—, human milk, quantitative estimation (Macy, Outhouse, Graham, and Long) 189
D, quantitative determination. I (Sherman and Hessler) 113
Technique for study (Macy, Outhouse, Long, and Graham) 153

W

Walden inversion:
IX (Levene and Walti) 263
Water:
Absorption by magnesium perchlorate trihydrate (dehydrite) in gravimetric metabolism determination (Lee and Brown) 69
Wheat:
Gliadin, denaturation (Gottenberg and Alsberg) 581

Wheat—*continued:*
α- and β-glutelins (CSONKA and JONES) 321
Wool:
Cholesterol content (ECKSTEIN) 363

Y

Yeast:
Nucleic acid, micro determination of pentose in (HOFFMAN) 15
